

# The Changing Climate Show

Immersive Object Theater

**“What are you doing about today’s ‘hottest’ science topic?”**

The *Changing Climate Show* is Science North’s latest immersive object theater based on our award winning and wildly popular *Climate Change Show*.

Sheepy the slightly sarcastic straight talking animated sheep, narrated by comedian Rick Mercer, returns with a new message about Climate Change:

*“It’s here lamby. You can taste it in the grass...”*

The *Changing Climate Show* leads the audience on an exploration of the ongoing effects of climate change on human and natural habitats, and looks for ways humans can meet these changes with creative and innovative ideas.

### **The Story**

Sheepy and his friends have a problem. Their pasture is drying up and they need a plan. To aid in their fight against climate change, Sheepy and his friends have created the Fleece-Net, a global network of woolly ungulates, which allows them to benefit from the perspective and wisdom of other sheep around the world.

Alternating between global anecdotes and the hard science of climate change, Sheepy arrives at both a plan and an insight:

*“The ideas may come from everywhere,  
but the solutions to climate change will be local,  
because the effects of climate change  
will be different everywhere.  
There is no one size fits all way to adapt  
to climate change.”*

### **The Exhibit**

The *Changing Climate Show* is a unique, multimedia installation that combines media technologies, theatrical effects and built environments to create experiences that communicate a difficult topic in a memorable, educational, and very entertaining way. Science North’s team of scientific and multimedia experts have conceived and produced these award-winning experiences for over 2 decades.

The *Changing Climate Show* brings to visitors of all ages:

- A straightforward, current and relevant exploration of the impacts of climate change.
- A beautiful built environment that captures the imagination and attention of audience.
- Dynamic and often surprising special effects that help illustrate the Earth’s reactions to a changing climate.
- A cast of fun, memorable characters who entertain as they teach.

After experiencing this show your audience will ...

- Understand that climate change is happening.
- Understand that our increasing vulnerability to weather events means that societies and communities need to adapt to climate change.
- Be aware that creative innovation in technological, political, and social arenas are necessary to help all species adapt to a changing planet.

The *Changing Climate Show* is available as a turnkey Object Theater. Special effects include award-winning animation, custom lighting, and custom music composition. Audiences are kept on their toes when witnessing hidden objects that seem to appear out of nowhere!

Your theater can also be further customized for your audience with the following:

- Region specific voice over.
- Region specific stock footage.
- Region specific climate change examples, such as: droughts, flooding, and other extreme weather events.

#### **SIZE**

Footprint: an 800 sq./ft. to 3,000 sq/ft., enclosed room  
Seating: 20-45 guests

#### **COST**

From \$500,000 to \$800,000 depending on existing infrastructure
